

World Happiness Report

Capstone Project – Google Data Analyst

Introduction

World Happiness Report

The aim of this project is to analyze a public dataset taken from Kaggle to find out what are the parameters that influences happiness in the world. The World Happiness Report dataset provides annual insights into global happiness rankings based on factors like GDP per capita, social support, life expectancy, freedom, generosity, and corruption perceptions. This analysis aims to explore these factors to understand what influences happiness across different countries. I will be using R programming which I learnt from Google Data Analyst course to analyze the data for year 2019.

Understanding the data

World Happiness Report - 2019

Loading and preview

Understanding the data

World Happiness Report - 2019

Structure of the dataset

There are total of 156 rows and 9 columns in the dataset. Most of the data are float type except Overall.rank which is integer type and Country.or.region which is char type.

```
'data.frame': 156 obs. of 9 variables:
 $ Overall.rank      : int  1 2 3 4 5 6 7 8 9 10 ...
 $ Country.or.region : chr  "Finland" "Denmark" "Norway" "Iceland" ...
 $ Score             : num  7.77 7.6 7.55 7.49 7.49 ...
 $ GDP.per.capita    : num  1.34 1.38 1.49 1.38 1.4 ...
 $ Social.support     : num  1.59 1.57 1.58 1.62 1.52 ...
 $ Healthy.life.expectancy : num  0.986 0.996 1.028 1.026 0.999 ...
 $ Freedom.to.make.life.choices : num  0.596 0.592 0.603 0.591 0.557 0.572 0.574 0.585 0.584 0.532 ...
 $ Generosity        : num  0.153 0.252 0.271 0.354 0.322 0.263 0.267 0.33 0.285 0.244 ...
 $ Perceptions.of.corruption : num  0.393 0.41 0.341 0.118 0.298 0.343 0.373 0.38 0.308 0.226 ...
```

Data cleansing

Checking NA value

There is no NA value in the dataset.

World Happiness Report - 2019

```
#### Check for any NA values
```

```
{r}  
sum(is.na(df))
```

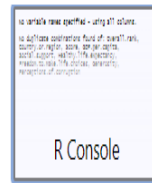

```
[1] 0
```

Data cleansing

World Happiness Report - 2019

Checking for duplicates

There is no duplicate found in the dataset.

No variable names specified - using all columns.

No duplicate combinations found of: Overall.rank, Country.or.region, Score, GDP.per.capita, Social.support, Healthy.life.expectancy, Freedom.to.make.life.choices, Generosity, Perceptions.of.corruption

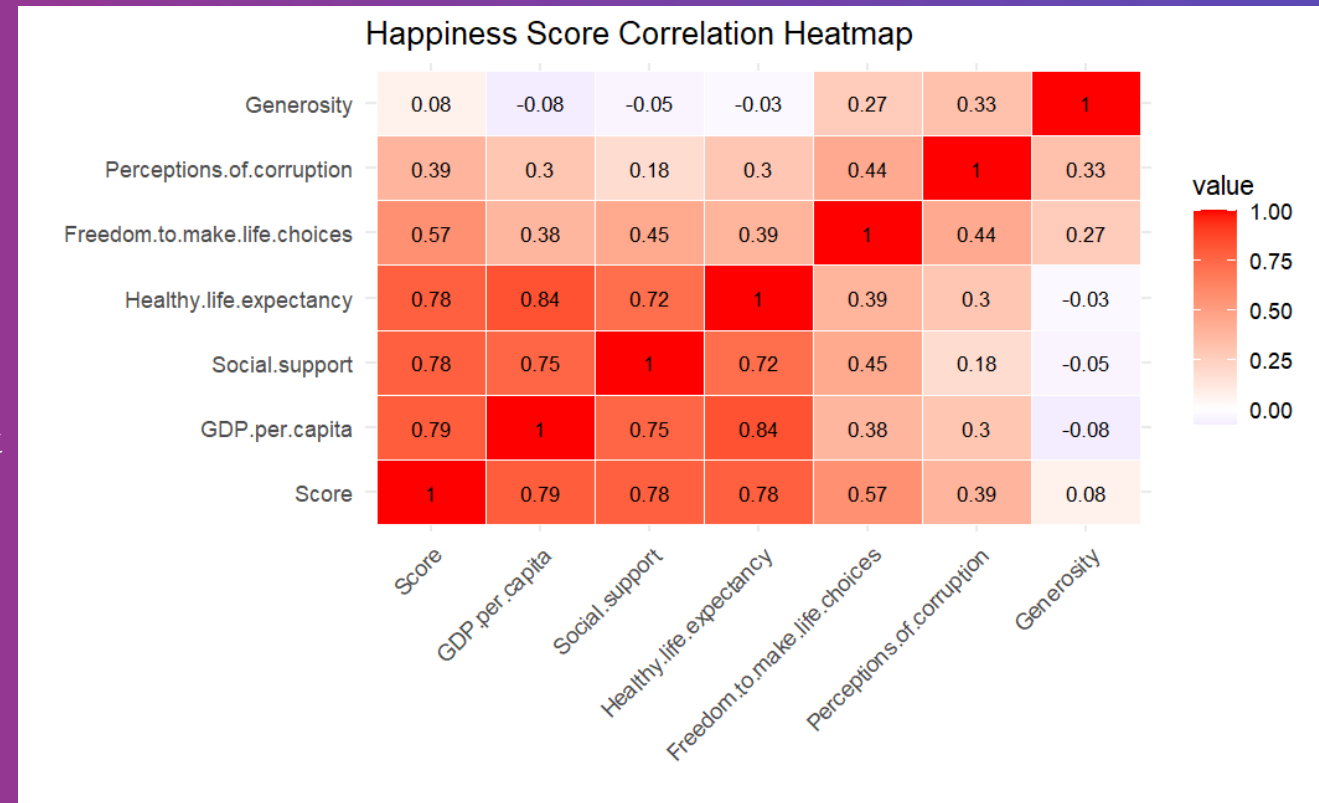

Factors that affect Happiness Score

Happiness Score Correlation Heatmap

Findings

Strongest Positive Correlations:

- Score and GDP per Capita (0.79): Higher GDP per capita correlates with higher Happiness Scores.
- Score and Social Support (0.78): Strong social support networks are associated with higher Happiness Scores.
- Score and Healthy Life Expectancy (0.78): Higher life expectancy correlates with higher Happiness Scores.

Mean and Median

Mean & Median of the Score and affecting factors

We calculated the mean and median for the happiness score and the contributing factors that affect happiness.

```
[1] "Median Happiness Score: 5.38"  
[1] "Mean Happiness Score: 5.41"  
[1] "Median GDP per captia: 0.96"  
[1] "Mean GDP per captia: 0.91"  
[1] "Median Health Life Expectancy: 0.79"  
[1] "Mean Health Life Expectancy: 0.73"  
[1] "Median Social Support: 1.27"  
[1] "Mean Social Support: 1.21"
```

Countries with higher than average happiness score, GDP, Healthy and Social

Findings

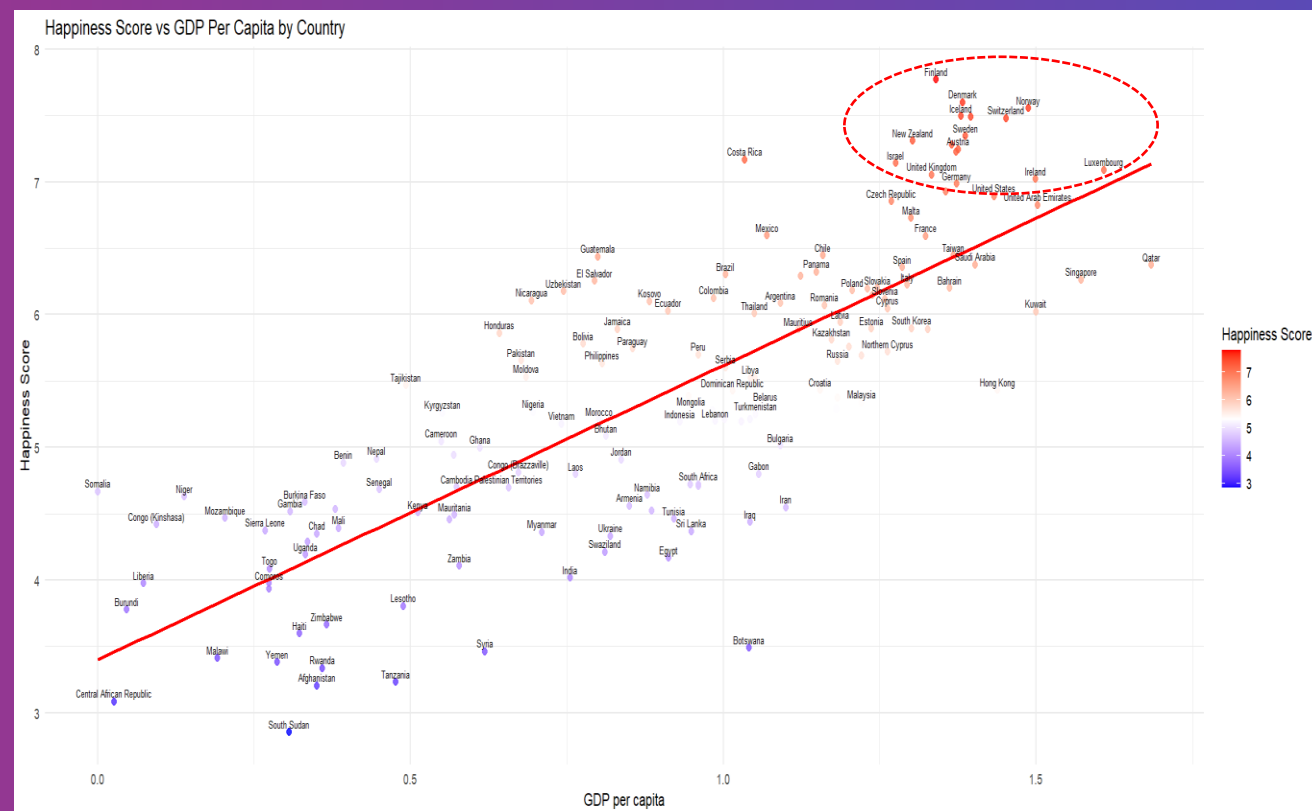

We can see that top 10 countries are mostly from Europe, only Canada and New Zealand are non-European countries. Singapore ranked in number 33.

Country or region	Score	GDP per capita	Healthy life expectancy	Social support
<chr>	<dbl>	<dbl>	<dbl>	<dbl>
Finland	7.769	1.340	0.986	1.587

Croatia	5.432	1.155	0.914	1.266
Hong Kong	5.430	1.438	1.122	1.277
Dominican Republic	5.425	1.015	0.779	1.401

Relationship between Happiness Score vs GDP by countries

Findings

The countries with high happiness score vs GDP are mostly from Europe and only New Zealand is a non-Europe country.

Relationship between Happiness Score vs Social Support by countries

Findings

For Happiness Score vs Social Support, there are a number of countries from Europe and a few non-European countries which are New Zealand, Australia, Canada and Costa Rica are having high scores.

Relationship between Happiness Score vs Healthy Life Expectancy by countries

Findings

For Happiness Score vs Healthy Life Expectancy, there are a number of countries from Europe and a few non-Europe countries which are Canada and Costa Rica are having high scores.

Summary

Conclusion:

- The analysis provides valuable insights into the multifaceted nature of happiness and well-being. It emphasizes the interconnectedness of economic, social, and health factors in determining happiness.
- Policymakers or researchers can use these insights to target areas for improvement and enhance overall happiness.

Recommendations:

- Policies aimed at increasing GDP per capita can have a significant positive impact on happiness.
- Strengthening social networks and support systems is crucial for improving happiness.
- Ensuring access to quality healthcare and promoting healthy lifestyles can boost life expectancy and overall happiness.

A woman with dark curly hair and glasses is smiling and looking to the right. The image is partially covered by a purple and pink gradient overlay at the bottom.

THANK YOU!

Smile and be happy!
